

CBPR - Side transverse channel bar for RR

HOME > CATEGORIES > INTERNAL BUILDING SYSTEMS > CBPR - SIDE TRANSVERSE CHANNEL BAR FOR RR

It is used to increase the internal mounting capacity of Rack Enclosures (RR). Mounted to the vertical bearing bars of the enclosure frame. An appropriate dimension of CBPR channel bar ensures common surface with the bearing beams to the depth of the enclosure frame. This allows for mounting of partial bearing elements e.g. shorter vertical beams with the PUB universal mounting plates.

It is made of 2 mm thick galvanized steel sheet.
